

Aware360

PeopleIoT™

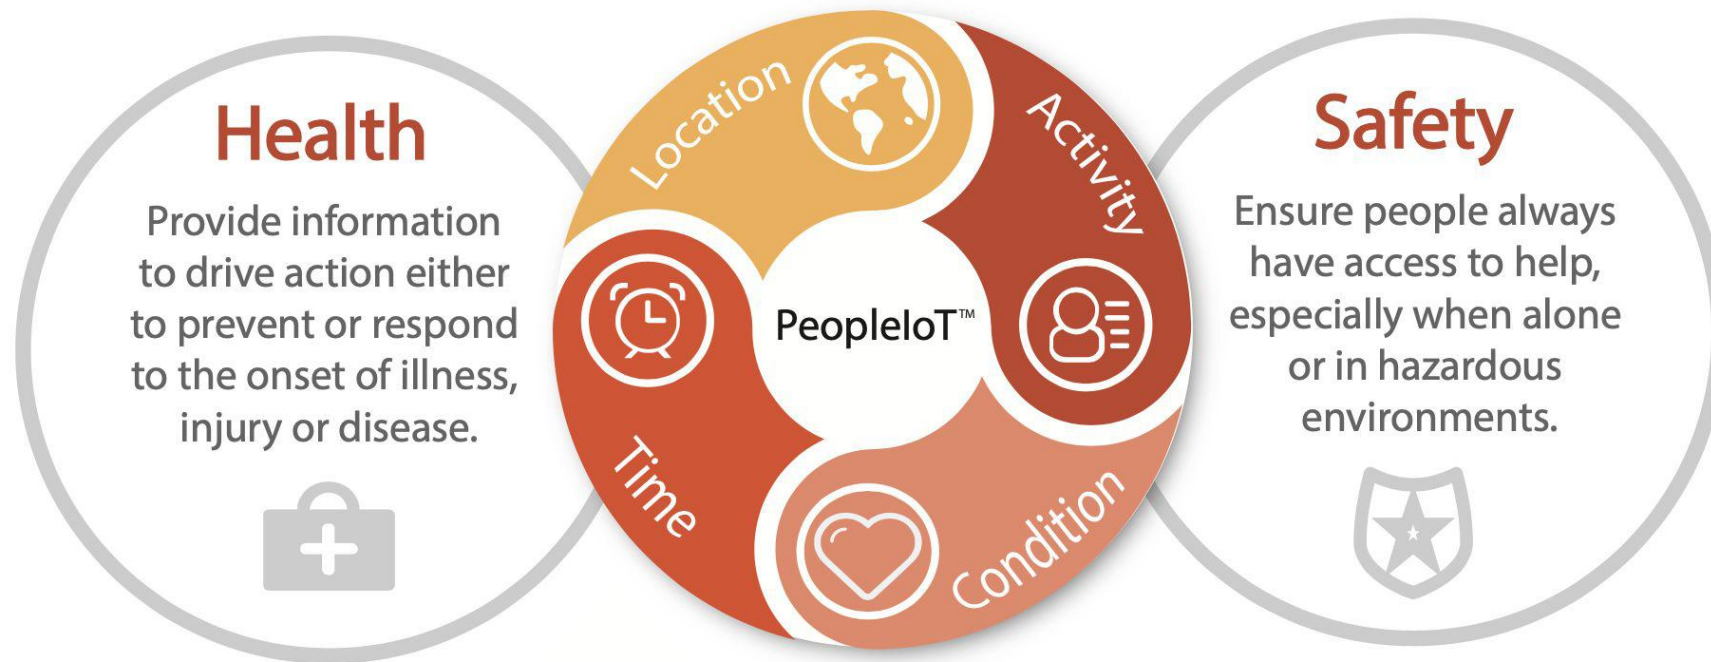

real time data. real time decisions.™

Aware360 makes peoples' lives better through early identification and notification of risks and events to a trusted response center, enabling the intended result. Our solutions leverage personal technology (e.g. wearables and smartphone apps) to ensure each individual is protected, regardless of their environment.

Managers, co-workers, family members and friends can be certain their colleague, friend or family will receive help when needed. Aware360 solutions enable a robust and growing global ecosystem of device manufacturers, Internet of Things (IoT) platform providers and Real Time Response Partners.

Enhancing Lives

Our goal at Aware360 is to enhance the lives of people through increased safety and wellness regardless of their unique environment. To achieve this, we focus on four main elements - location, activity, condition and time - used to provide improved safety and health. These factors can also be leveraged to provide access to restricted areas, for rapid payments or for collaboration purposes.

Solutions

Aware360's solutions are for 'at risk' workers, student safety, health monitoring, driver safety and family member safety. We help keep people safe, healthy and secure regardless of their unique situation.

Two - Way Digital Communication

Safety³⁶⁰

People work, study and play in many high-risk environments which expose them to hazards affecting their well-being. Aware360's solutions help people stay safe by connecting them with people who can help. Leveraging a variety of technology such as smartphone apps, wearables and satellite devices we deliver critical information to the right people ensuring your intended result.

Employee Safety

Employers are responsible for the safety of all employees, especially ones who often work alone or in risky environments. Aware360 connects those workers to people who provide assistance should an incident occur - creating a safe work environment.

Student Safety

Students face a different variety of risks - being away from home, having increased anxiety or exposure to high risk events. Aware360 provides wearables and apps to connect students to campus security and / or authorities.

Family Safety

Aware360 provides wearables to increase independence, provide greater visibility and protect those who are vulnerable (ie; children, aging loved ones and those with health conditions) while providing caregivers and parents peace of mind.

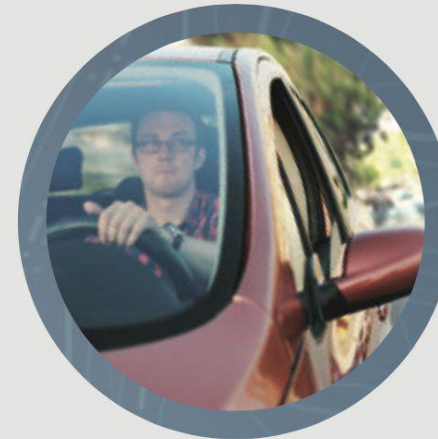

Health³⁶⁰

Aware360 solutions give individuals, health-care providers and organizations greater insight to help prevent issues before they begin. Rather than wait for people to become sick or injured, conditions can be discovered or managed in real time.

Health Monitoring

For anyone who wants deeper insight into their wellbeing, our solutions leverage wearable technology which collect real time data to improve health outcomes.

Driver Safety

Road safety is critical for drivers as well as those they share the road with. We provide warnings for things such as oncoming fatigue and poor road conditions to ensure everyone makes it home safely.
