

IoTCAN

IoTCAN, Canada's leading Low Power Wide Area Network (LPWAN) Internet of Things (IoT) network provider, launched their LoRaWAN™ network in June 2017 covering the Greater Toronto Area as a first step in a Canada-wide rollout. IoTCAN is working with several key partners to provide carrier grade and fully integrated customizable solutions, encompassing different parts of the IoT value chain in the Low Power Wide Area Network (LPWAN) segment of the market including user devices, network and application layers.

TEKTELIC Communications, a leading supplier of LoRaWAN™ gateways, sensors and applications for the Internet of Things (IoT), was selected by IoTCAN to supply their best in class high capacity **KONA Macro IoT Gateway** for their announced LoRaWAN network rollout. The KONA Macro IoT Gateway enables high scalability, carrier grade resiliency, rapid network deployment and a very long lifecycle. It has highly differentiated features such as Frequency Division Duplex, Multiple Rx/Tx antennas, multiple simultaneous Tx channels, and built-in highly selective bandpass filters.
